Inflated Depth	50 cm / 19.6"
Product Weight	3.6 kg / 8 lbs
Max User Weight	450 kg / 70 st
Lifting performance per charge	9 lifts

The Elk Emergency Lifting Cushion stands as a compact and portable solution, featuring a battery-powered emergency lifting mechanism crafted for safely aiding users in returning to an upright position following a fall.

This lifting cushion, known as Elk, boasts complete portability and includes its own battery-powered compressor. This distinctive feature allows its utilisation in various settings, whether indoors or outdoors. Its effectiveness shines in confined spaces or small rooms where conventional lifting equipment may pose challenges.

Effortless in operation and designed for collaborative use with a caregiver, the fallen individual is gently moved onto the lifting cushion and assisted into a seated position. Subsequently, the Elk gradually inflates while the caregiver stands behind, providing support until the user reaches a sufficiently elevated position to stand or facilitate transfer to a wheelchair. The implementation of the Elk significantly reduces the risks of accidents or injuries for both the caregiver and the user, particularly crucial when assisting individuals with greater weight.

The Airflo 24 by Mangar Health is a low-pressure air compressor which has been designed to inflate the ELK lifting equipment through a 4-Way hand control.
