Laser Cane

PRODUCT CODE: US003

Laser and Audio Cueing Module

The LaserCane is a lightweight adjustable walking stick which projects a bright green line across your path. It is specifically designed to help people with gait freezing or gait ignition failure such as occurs in Parkinson's Disease and other Parkinsonian conditions. It is also useful for abnormal gait patterns such as Ataxia and stroke rehabilitation

- Lightweight cane that is completely height adjustable for the most comfortable fit
- Weight activated switch activates the laser line when you press down on the cane and switches it off when you lift it
- Powered by two AA batteries, which typically last several months (depending on usage)
- All wires and laser components are hidden and well-protected inside the cane

The LaserCane is perfect if you need minor walking support, help with gait freezing and help to increase your stride length.

- Manufactured in high-resistance & low weight aluminium tubing
- 20mm non-slip tips for added safety
- Extremely comfortable shock absorber that reduces impact forces and helps protect the joints, especially the shoulder joint
- Max user weight: 100kg (15.10st)
- Minimum-maximum height: 90-115cm
- Handle height: 68-93cm

PRODUCT CODE: 52CNX2AMPMAM

U Step Walking Stabiliser

PRODUCT CODE: US001-3

The U-Step 2 is a unique walking aid specially designed for people suffering from Parkinson's Disease and other Neurological Conditions where there is postural instability.

This includes conditions such as:

- Stroke, Brain Injury & Balance Disorders
- Multiple Sclerosis (MS)
- Ataxia, Multiple System Atrophy (MSA)
- Progressive Supranuclear Palsy (PSP)
- Parkinson's Disease
- Motor Neurone Disease

The U-Step 2 comes with the following features as standard:

- **Reversed braking system** – The U-Step will not roll until you gently squeeze either hand brake. This innovative system is easy to use and put the user in complete control. Once you release the handbrake, the U-Step will stop immediately. This feature is particularly helpful when standing up from a chair, as the walker will not roll away from the user.
- **Rolling resistance control** – adjust the speed at which the wheels roll to ensure the rollator is not too fast and moves at a speed that suits the individual user. This is a very simple process and only requires a flat screwdriver.
- **Spring loaded front wheel** – this allows the walker to glide easily over uneven surfaces ensuring there is no need to lift the walker. This feature also ensures there are no sudden jolts.

Key Features

The U-Step is a unique design with seven wheels so it is ultra-stable, it was designed specifically for people with neurological conditions.

Postural Correction: The U-shaped frame surrounds the patient's centre of gravity, encouraging a more upright posture and reducing the tendency to shuffle (festination).

Postural Instability: The U-Step is designed to provide greater postural stability helping to prevent and reduce falls. Users also feel safer because of the U-shaped design that surrounds them while walking. Many users have reported that they feel as stable as holding another person's arm. The anti-tip wheels on the U-Step add extra stability and ensure the user won't fall backwards.

Manoeuvrability: The U-Step also boasts a unique wheel configuration, which enables it to have a very tight turning circle (29 inches/74cm) making it more manoeuvrable in small spaces such as toilets. The patented spring-loaded front caster wheel system glides easily over uneven surfaces. The U-Step can be used both inside and outside.

Comfort: The U-Step has a comfortable padded seat and backrest, this is ideal for situations where a break from walking may be required. There is a small basket under the seat for added convenience.

Easily Transported: Folding the U-Step is simple. Release the locking clips, lift the release lever by the seat and pull up on the seat support to fold the U-Step. It fits in the boot or back seat of most cars and should you require it to be smaller, you can remove the backrest and lower the handles without tools.

Optional Feature:
Laser & Sound Cueing Module

STRAIGHT STAIRLIFTS

If your staircase is straight and does not have any corners, we offer a fantastic range of straight stairlifts to suit your needs.

HANDICARE 1100

The Handicare 1100 is the slimmest stairlift on the market. The super slim line rail is the narrowest on the market so it obscures less of your stairs than any other straight stairlift system. The Handicare 1100 also features continuous charge functionality, so you can park the seat anywhere you like on the rail and it will stay charged.

HANDICARE 1000

The Handicare 1000 features a range of customisable options including a choice of seat colour and optional powered swivel and footplate.

It is also available in XL and XXL sizes which cater for weights up to 200kg. The 1000 can also be configured with a powered hinge to prevent the track obscuring a doorway.

CURVED STAIRLIFTS

Curved stairlifts have tracks that are specifically designed to suit staircases that turn corners. Customisable options include a choice of seat style, rail colour, upholstery colour and powered options.

HANDICARE 2000

Ideal for short stairs of 5m or less. The compact twin rail curved system is designed for a stable and smooth ride.

Available in 2 seat options: the Simplicity and the Style.

VAN GOGH

This stylish single rail curved stairlift fits on the external side of the staircase and comes with 7m of track and includes two 90° bends as standard. The Van Gogh is ideal for staircases with multiple turns.

REMBRANDT

Similar to the Van Gogh this stylish single rail curved stairlift fits on the internal side of the staircase. It comes with 5m of tracks and includes two 90° bends as standard.

Free Stairlift Assessment Course

We are offering a free CPD course to assist Occupational Therapists when accessing for a stairlift. Please contact your local sales representative to find out more.
